

SOUND LEVELS

Each part of the sanctuary will hear a softer or louder experience based on how the sound travels throughout the room. On this graph, the color reflects this sound experience. The lighter the color, the softer the sound; the darker the color, the louder the sound. If you find the sound level too loud for your comfort, you can look for seating in the lighter-colored spaces for a softer sound experience. We strive not to exceed 92 decibels in the loudest section.
